2. OBJECTIVES AND LEARNING OUTCOMES

Objectives

The history of communication research and research methodology issues are closely linked, as the examination of communicative phenomena as communicative phenomena was mainly formed during the rethinking of traditional disciplinary frameworks and their transformation along new aspects, conceptual systems and methods. On the one hand, the course provides an overview of these propositions, and on the other hand, it shows how today's communication research approaches the study of communicative phenomena by means of investigation methods and interdisciplinary foundations. We review the theoretical questions in a scientific theoretical framework that also gives us the opportunity to examine the role of the field's co-disciplines (e.g. sociology, anthropology, philosophical analysis, critical cultural research, cognitive and evolutionary psychology, environmental psychology). During the semester, the students work in groups on a research project of their choice, and the discussed topics are formulated and examined in the context of these projects.

Academic results

Knowledge

1. Basic knowledge of social science methodologies.

Skills

1. Ability to recognize social and communication problems, and to choose appropriate solutions
2. Ability to make judgements in practical tasks, ability to make independent decisions
3. Reliable use of professional language.

Attitude

1. Professional and moral stand
2. Self-reflection of one's own abilities
3. Acceptance of one's own (Western) cultural traditions

Independence and responsibility

1. Adoption and enforcement of professional standards
2. Independence
3. Constructiveness and assertiveness in the context of institutional operation.

Teaching methodology

The course is of a practical nature, the topics are examined through specific case studies. The students form research groups of 5 people (8 groups in total), during the semester, the research groups prepare an analytical study on a communicative phenomenon of their choice.
